PowerFlex 755TS variable speed drives

Smart, flexible and powerful, PowerFlex 755TS variable speed drives from Allen-Bradley are designed to deliver greater production output, uptime, energy saving and productivity.

Designed for virtually any application or industry, let PowerFlex 755TS variable frequency drives do the heavy lifting. You'll increase productivity and uptime plus, reduce energy and maintenance costs.

Features and benefits:

- The first ever six-pulse standard drive to feature Allen Bradley's patented TotalFORCE® technology
- Delivering flexible, high-performance motor control
- Reduce downtime with real-time operational intelligence and advanced self-monitoring capabilities allowing you to project the remaining life span of critical drive components based on actual use and environment, giving you more time to plan and act.
- Start up faster and run longer with adaptive control features allowing increased productivity, reduce mechanical wear and downtime
- CIP Security enabled to provide the final layer of defence against malicious communication attacks commonly carried out over large organisational networks by providing data authenticity, integrity and confidentiality.
- Corrosive Gas Protection (XT) is also now available throughout the PowerFlex 755TS range, reducing the threat of premature equipment failure from corrosive gas environments.
- Flexible enclosures options to cater for varying environmental conditions. IP00, IP20, IP54 and flange mount options available
- Built -in dual port Gigabit Ethernet/IP as standard provides 10 times faster data handling, information and storage needs
- Operating temperature up to 60°C with derating and upto 50°C with no derating
